HyperEuclideanSet (aka **HyperEuclidean MIDI Generator)** is a 6-track algorithmic sequencer based on Euclidean rhythm geometry. Instead of traditional step-by-step programming, you define the "density" of notes within a time space, allowing for the creation of complex polyrhythms and generative melodies in seconds.

Read the user manual for usage details.

Todo:

- Add MIDI Learn (for live performance)
- Fix the GUI
- Optimize CPU load and startup times (especially for standalone)
- Other …

Thanks for the inspiration to Andreas Sandersen (sandy999999) with his “Rhythm-generator” here https://github.com/sandy999999/rhythm-generator) and to Paul V. Miller (lauprellim) with his “Higher-order Euclidean Sets” here https://github.com/lauprellim/euclid .
